- **Blood drug tests** are more accurate than urine drug tests, but they are also more invasive and expensive. Blood drug tests can be used to detect a wider range of drugs than urine drug tests, and they can also be used to determine the concentration of drugs in the blood.
- **Hair drug tests** are less invasive than blood drug tests, but they are also less accurate. Hair drug tests can be used to detect a wider range of drugs than urine drug tests, but they can only detect drugs that have been used within the past few months.
- **Saliva drug tests** are a relatively new type of drug test that is becoming increasingly popular. Saliva drug tests are non-invasive and easy to administer, and they can detect a wide range of drugs.
